

Monthly Report – April 2018

Fund Description

The Fiducian Growth Fund is intended to have a relatively higher exposure to shares than either the Fiducian Capital Stable Fund or the Fiducian Balanced Fund and therefore should be capable of generating higher returns, but it will also be exposed to capital losses when markets turn down. Over long periods of time (at least 5 to 7 years), growth funds tend to outperform other managed funds that have a lower exposure to growth assets (shares and property).

This Fund is suitable for investors seeking good long-term capital growth with possible short-term volatility. Investors should be prepared to hold their investment for periods exceeding five years. Holdings include international and Australian shares, property, fixed interest and liquid assets.

Manager Commentary

The Fund out-performed the median manager during April, rising 2.6% against a gain of 1.8% by the benchmark. Over the rolling year, the Fund out-performed the median manager by 3.2% with a return of 9.2%. During the month, cash and bonds significantly under-performed domestic equities, global equities and domestic listed properties. Domestic equities and property securities rose solidly in April and out-performed international equities in local currency terms. The Fund's overweight exposure to both global and domestic shares added to fund performance. A 1.9% fall in the Australian Dollar against the US Dollar added to fund performance in local currency terms. Out-performance by the Fiducian Australian Shares Fund also contributed to fund performance on a relative basis. Underweight exposure to defensive assets also contributed to fund performance as fixed interest sectors were negative, with the Australian 10-year Government bond yield rising by around 0.17% during the month. Energy, base metals and bulk commodities prices were broadly higher during the month, which boosted the resources sector.

An overweight exposure to international and domestic equities remains, as currently valuations for equities still appear to be more attractive than for Australian and international bonds, despite a recent fall in the bond markets. This fund was ranked 6th out of 178 multi-sector diversified balanced/growth funds surveyed by Morningstar for the rolling year, while it ranked 1st out of 163 funds over the 5 years to end-April.
