

Fund Description

The Fiducian Ultra Growth Fund is intended to have over 95% exposure to growth assets and no exposure to bonds, which are defensive assets. The Fund should therefore be capable of generating high returns over the longer term, but it will also be exposed to significant volatility at times and capital losses when markets turn down. Over long periods of time (at least 7 to 10 years), this Fund should tend to outperform other managed funds that have a lower exposure to growth assets. Assets held by the Fund include international small-cap shares, emerging markets shares, Australian small-cap shares, international technology shares, Australian and global listed property securities and a small proportion of liquid assets. There is only minimal exposure to large-cap shares.

This Fund is suitable for investors seeking good long-term capital growth with possible significant short-term volatility at times. Investors should be prepared to hold their investment for periods exceeding seven years.

Manager Commentary

The Fiducian Ultra Growth Fund out-performed the median manager during May, gaining 1.7% against a median return of 0.5%. Over the rolling year to end-May, the Fund also out-performed the median manager, rising 14.0% against a median return of 8.2%. Contributing to fund performance in relative terms during the month were a stronger than benchmark performance by the Fiducian Technology Fund. The relative under-performances of the Fiducian Australian Smaller Companies Fund, the Fiducian Global Smaller Company and Emerging Markets Fund and the Fiducian Property Securities Fund, however, detracted from fund performance.

For the 5 years ended-May, the fund ranked 1st out of 102 Multisector Aggressive funds surveyed by Morningstar, while it also ranked 1st out of 80 funds over the 9 years. This out-performance could be attributed to the fund's asset allocation, including exposure to the out-performance of key underlying funds, including the Fiducian Property Securities Fund, the Fiducian Australian Smaller Company Shares Fund and the Fiducian Technology Fund, which returned in excess of 14% per year each over the 9-year period. Exposures to underlying sectors remained broadly unchanged in May.
